CENTRAL PHILIPPINE UNIVERSITY

College of Computer Studies

CCS 3031 - WEB SYSTEMS AND TECHNOLOGIES

FINAL EXAMINATION - WEBSITE REDESIGN AND DEVELOPMENT PROJECT

Project Title: Redesign and Enhancement of the CPU College of Computer Studies Website

Reference Website: https://ccs.cpu.edu.ph/

Group Composition: Three (3) students per group

Total Score: 100 Points

I. PROJECT OVERVIEW

For the final examination in CCS 3031 - Web Systems and Technologies, students are required to redesign and improve the existing website of the Central Philippine University College of Computer Studies (CCS). The project demonstrates the ability to apply web development concepts, user interface design principles, component-based architecture, routing, and responsive web design using **Vue.js**.

Students must use the existing CCS website as their reference and develop an improved version featuring a modern, professional, user-friendly, and visually appealing interface. The redesign must preserve the identity of the College of Computer Studies while improving design, organization, navigation, accessibility, and functionality. The project is not simply a reproduction of the original website.

II. PROJECT OBJECTIVES

1. Analyze an existing website and identify areas requiring improvement.

2. Design and develop a modern, responsive, and functional website using Vue.js.

3. Apply component-based development and client-side routing.

4. Organize academic programs, faculty information, and college-related content into clearly structured pages.

5. Implement effective navigation and appropriate interactive features.

6. Demonstrate visual consistency, readability, and user experience.

7. Test the website across different screen sizes and devices.

8. Prepare professional documentation of design, development, features, and functionality.

9. Demonstrate and explain the completed project and individual contributions.

III. GROUP REQUIREMENTS

1. Each group shall consist of exactly **three (3) students**, based on assigned groupings.

2. All members must actively participate in planning, design, development, testing, and documentation.

3. Responsibilities must be distributed fairly.

4. Each member must understand the overall website, not only their assigned portion.

5. Individual contributions must be identified in the documentation.

6. All three members must participate in the final demonstration and answer technical questions.

IV. WEBSITE DEVELOPMENT REQUIREMENTS

A. Reference Website

Use https://ccs.cpu.edu.ph/ as the reference. Examine its existing pages, layout, navigation, content, and features. Identify what should be retained, redesigned, reorganized, or improved. The resulting website must be a significantly improved version, not a direct copy.

B. Required Pages and Views

1. Home Page

Main entry point with college identity, an attractive introduction, organized navigation, and highlights of programs, announcements, or activities.

2. About the College

Relevant college background, mission, vision, objectives, and other appropriate institutional information.

3. Academic Programs

Create **four separate Vue.js pages/views**: Bachelor of Science in Information Technology (BSIT), Bachelor of Science in Computer Science (BSCS), Bachelor of Science in Digital Media and Interactive Arts (BSDMIA), and Bachelor of Library and Information Science (BLIS). Do not combine the four programs into one page with brief descriptions. Each page must include the complete program name and overview, objectives, relevant areas of study, curriculum or course highlights, career opportunities, teachers associated with the program, and supporting visuals. Give each program a design reflecting its discipline while maintaining overall CCS visual consistency. Verify program content using reliable sources.

4. Faculty and Staff

Provide a dedicated Faculty and Staff page with teachers organized by BSIT, BSCS, BSDMIA, and BLIS. Where verified information is available, include faculty name, photo, academic title/designation, assigned program, and specialization. Teachers must also appear on their respective program pages. Do not fabricate information or assignments.

5. News, Events, and Announcements

Present relevant college news, activities, events, and announcements using an organized layout such as cards, listings, or categories.

6. Contact Us

Provide appropriate contact and location details. A contact form or map may be included. Forms must provide validation and feedback; clearly label demonstration-only functionality.

C. Technical Requirements

1. Vue.js: Develop the website using Vue.js.

2. Vue Router: Navigate between pages/views without full-page reloads.

3. Reusable Components: Use shared navigation, footer, cards, buttons, and other components.

4. Responsive Design: Support desktop, tablet, and mobile screens.

5. Functional Navigation: Ensure links, menus, buttons, and implemented features work.

6. Smooth Scrolling: Implement where appropriate for in-page navigation.

7. Code Organization: Organize components, views, assets, styles, and routing files logically.

8. Consistent Design: Use consistent typography, spacing, colors, and visual elements.

9. Content Quality: Use accurate, relevant, readable, and organized content.

10. Error-Free Execution: Avoid major errors, broken pages, and missing essential assets.

D. Design and Improvement Requirements

Demonstrate meaningful improvements in page layout, navigation, typography, visual hierarchy, reusable interface components, academic program and faculty presentation, readability, accessibility, mobile responsiveness, interactive features, and presentation of news/events. Creativity is encouraged while preserving institutional identity.

V. PROJECT DOCUMENTATION REQUIREMENTS

Each group must prepare one complete **printed Website Redesign and Development Report** describing the purpose, structure, design, implementation, features, and improvements of the website. Follow the sections below in order.

PART 1. COVER PAGE

Include Central Philippine University, College of Computer Studies, course, project title, complete names of the three members, course/year/section, instructor name, and submission date.

PART 2. INTRODUCTION

Explain the background and purpose of the CCS website, reasons for redesigning it, and intended users such as students, faculty, prospective students, and visitors.

PART 3. PROJECT OBJECTIVES

Present general and specific objectives for appearance, functionality, navigation, organization, and user experience.

PART 4. ASSESSMENT OF THE EXISTING WEBSITE

Describe the original website, provide screenshots of its important pages, identify observed design/navigation/usability limitations, and propose justified improvements.

PART 5. WEBSITE STRUCTURE AND NAVIGATION

Include a sitemap or navigation diagram showing the homepage, program pages, faculty pages, and other major views; explain user navigation.

PART 6. WEBSITE PAGES, FEATURES, AND USER MANUAL

Document **every major page or view** using: (A) Page Name, (B) clear screenshot(s), (C) Page Description, (D) Features and Functions, (E) User Instructions, and (F) Improvements Made. Cover Home, About, Academic Programs overview if implemented, BSIT, BSCS, BSDMIA, BLIS, Faculty and Staff, News/Events, Contact, and any additional pages. Long pages may require multiple screenshots. Explain all major sections and interactive features; do not provide screenshots without descriptions.

PART 7. BEFORE-AND-AFTER WEBSITE COMPARISON

Show original and redesigned screenshots side by side or sequentially, describe changes, and explain improvements. Compare important areas such as homepage, navigation, programs, faculty, and responsiveness.

PART 8. VUE.JS IMPLEMENTATION

Explain project folder/file structure, reusable components, Vue Router, directives and data binding where applicable, events, interactive features, responsive styling, and relevant development techniques. Include selected code snippets where useful; do not print the entire source code.

PART 9. WEBSITE TESTING AND RESPONSIVENESS

Describe tests of navigation, buttons/menus, images/content, desktop/tablet/mobile displays, problems found, and solutions. Include screenshots from different screen sizes and disclose known limitations.

PART 10. CONCLUSION

Summarize major improvements, development challenges, solutions, and lessons learned.

PART 11. REFERENCES

List information sources for program descriptions, faculty details, images, and other external materials.

PART 12. GROUP MEMBER CONTRIBUTIONS

Identify each of the three members, assigned responsibilities, and specific actual contributions.

Group Member	Assigned Responsibilities	Actual Contributions
Member 1		
Member 2		
Member 3		

VI. PRINTED DOCUMENTATION FORMAT

Item	Requirement
Paper Size	Long-size white bond paper (8.5 x 13 inches)
Font	Arial or Times New Roman
Font Size	12 pt body text
Line Spacing	1.5
Text Alignment	Justified body paragraphs
Margins	1 inch on all sides
Page Numbers	Required
Printing	Clear and readable; color recommended for screenshots
Folder	Clean white folder or transparent plastic folder with sliding binder
Copies	One (1) printed copy per group

1. Arrange all sections in the prescribed sequence.

2. Use consistent headings, subheadings, captions, and formatting.

3. Provide clear, appropriately sized screenshots with captions.

4. Avoid unnecessary blank pages, oversized images, and excessive decoration.

5. Ensure all required sections are complete.

6. Place printed pages securely inside the required folder.

7. Handwritten documentation will not be accepted.

VII. FINAL PROJECT SUBMISSION

A. Printed Project Documentation

Submit one complete printed report on long-size bond paper in the required folder.

B. Complete Source Code

Upload the complete Vue.js source code as a ZIP file through Canvas, including components, views, routing, assets, and configuration files. Exclude unnecessary generated folders such as node_modules.

C. Website Link

Submit a working deployed website link through Canvas. It must be accessible to instructors for checking and evaluation.

D. Final Project Demonstration

Demonstrate the website and explain its design, features, functionality, and technical implementation. All three members must participate. The submission deadline and demonstration schedule will be announced by the instructors.

VIII. PROJECT EVALUATION CRITERIA

Criteria	Percentage
Functionality and Completeness - required pages, programs, faculty, navigation, features	30%
User Interface and User Experience - design, consistency, creativity, usability	20%
Code Quality and Organization - readability, maintainability, file structure	25%
Vue.js Implementation - Vue, Router, components, binding, interactivity	15%
Responsiveness - desktop, tablet, mobile	10%
TOTAL	100%

Documentation completeness and quality will be considered when verifying implementation and evaluating the project.

IX. ACADEMIC INTEGRITY AND PROJECT POLICIES

1. Submit original group work; copying another group project is prohibited.

2. Do not submit an unchanged prebuilt website template as the final output.

3. Do not present AI-generated code or website designs as original work without meaningful development, understanding, and implementation; follow instructor AI-use requirements.

4. Be prepared to explain source code, Vue components, routing, and functionality.

5. Acknowledge external information, images, and other materials.

6. Do not fabricate academic information or faculty assignments.

7. All members are accountable for declared contributions.

8. Incomplete essential features or projects that fail to run may receive deductions.

9. Failure to submit required deliverables may affect the final grade.

X. FINAL REMINDERS

This final examination demonstrates the skills learned in CCS 3031 - Web Systems and Technologies. The final output must show both visual design competence and understanding of Vue.js, reusable components, routing, responsiveness, functionality, and professional documentation. **A successful project is functional, organized, visually consistent, properly documented, and demonstrably improved over the original CCS website.**
