CCS 3031 | WEB SYSTEMS AND TECHNOLOGIES

FINAL WEBSITE REDESIGN PROJECT

Analytic grading rubric | Total: 100 points

Project title: _____

Section: _____ **Date:** _____

Group members (3):

1. _____
2. _____
3. _____

Evaluator: _____

Choose a whole-number score within the band that best matches the observed work. Use the descriptors as anchors; award 0 when there is no assessable evidence. Record evidence and comments on page 2.

Functionality and Completeness | 30 points — Score: ____ / 30

27-30: Complete, working site; BSIT, BSCS, BSDMIA and BLIS pages and faculty grouped by program are present; navigation and required features work reliably.

21-26: Most required content and features work; minor omissions or defects have limited impact on use.

15-20: Several required elements are incomplete or faulty; users can complete only some intended tasks.

0-14: Major required content or features are missing or unusable; little functional evidence is available.

UI/UX | 20 points — Score: ____ / 20

18-20: Clear navigation and visual hierarchy; readable text, consistent styling and intuitive interactions support easy use.

14-17: Generally clear and consistent; minor layout, readability or interaction issues affect the experience.

10-13: Uneven styling, clutter or confusing navigation creates noticeable difficulty for users.

0-9: Disorganized or unclear interface; serious readability and navigation problems obstruct use.

Code Quality and Organization | 25 points — Score: ____ / 25

23-25: Readable, logically organized code; meaningful names, reusable structure and useful comments; minimal duplication.

18-22: Mostly readable and organized; some duplication or inconsistent naming and structure needs improvement.

13-17: Inconsistent organization and repeated code make maintenance difficult; limited clarity or explanation.

0-12: Poorly organized or largely unreadable source; substantial duplication or insufficient assessable code.

Vue.js Implementation | 15 points — Score: ____ / 15

14-15: Vue components, reactive data, bindings and events are used correctly and purposefully; component structure supports reuse.

11-13: Vue is used appropriately overall; minor issues in reactivity, component design or event handling remain.

8-10: Basic Vue use is evident, but limited componentization or repeated implementation errors reduce effectiveness.

0-7: Vue use is absent, minimal or substantially incorrect; core implementation cannot be demonstrated.

Responsiveness | 10 points — Score: ____ / 10

9-10: Layouts, text, navigation and images adapt well to mobile, tablet and desktop; no obstructive overflow.

7-8: Works across common screen sizes; a few minor spacing, sizing or alignment issues remain.

5-6: Some layouts adapt, but recurring overflow, crowding or navigation issues impair use.

0-4: Little effective adaptation; major layout or usability failures occur on smaller screens.

TOTAL SCORE: _____ / 100

FINAL WEBSITE REDESIGN PROJECT

Submission verification, evidence and evaluator feedback

Project title: _____

Section: _____ **Group / team:** _____

REQUIREMENT CHECKLIST

Mark one status per item: V = verified / complete, P = partial, M = missing / not shown. This checklist records evidence for the five criteria; it does not add points or create separate deductions.

Requirement / evidence to verify	V	P	M
BSIT program page	☐	☐	☐
BSCS program page	☐	☐	☐
BSDMIA program page	☐	☐	☐
BLIS program page	☐	☐	☐
Faculty directory grouped by program	☐	☐	☐
Printed project documentation submitted	☐	☐	☐
Working website available and accessible	☐	☐	☐
Source ZIP submitted and readable	☐	☐	☐
Project demonstration completed	☐	☐	☐

EVIDENCE, COMMENTS AND RECOMMENDATIONS

Note strengths, missing requirements, defects observed, and the reason for awarded scores. Include device or screen-size observations where relevant.

Final score: _____ **/ 100**
